# MEMORANDUM

---

TO: Ian Horton, ASLA, PLA, Pacific Landscape Architecture

FROM: Michael Matthes, PE

SUBJECT: Winnie Houser Sewer Pump Station Evaluation

WILSON JOB NO.: 2019-126

DATE: 4/27/2020

---

The purpose of this memo is to evaluate the adequacy of the grinder pump station proposed by the City. The proposed grinder pump station is a Zoeller simplex X840 as described, and with options identified, on the attached Technical Data Sheet.

## 1) Understanding

The pump station will be located about 100' from the restrooms. Wastewater will flow by gravity from the restrooms to the pump station. The pump station will then pump the effluent through about 330' of 2" HDPE force main and into a gravity cleanout or manhole with no back pressure. The force main is relatively flat.

## 2) Flows

The proposed restroom facility will have 3 toilets, 1 urinal, and 2 sinks. Toilets and urinals will be flush valve operated. From the Uniform Plumbing Code, the number of total fixture units is estimated at 25, and the corresponding peak flow is estimated at 35 GPM.

## 3) System Curve

A system curve table (see attached) was developed to calculate Total Dynamic Head (TDH) versus flow from zero up to 50 GPM. Various assumptions for friction coefficient, minor head losses, and elevation were made. The calculated TDH at 35 GPM is about 13'.

## 4) Conclusion

Evaluation of the hydraulics indicates that the proposed pump station is adequate for the intended use. The estimated peak system flow of 35 GPM is below the pump maximum flow rate of 54 GPM, and the calculated maximum TDH of 13' is well below the pump maximum TDH of 125', as indicated on the technical data sheet. The system operating point falls within the provided pump curve. Impeller trim options and efficiencies were not evaluated.

The technical data sheet indicates that the 72" depth configuration is proposed. Once proposed surface grades and pipe inlet / outlet inverts are known, the appropriateness of this configuration, as well as proposed float settings, should be confirmed with the manufacturer.

805 Dupont Street, Ste. #7, Bellingham, Washington 98225  
Telephone: (360) 733-6100 • Facsimile: (360) 647-9061

# MEMORANDUM

Mitigation for the potential of floatation should be considered. Buoyancy calculations (see attached) were performed for the 72' depth configuration based on a number of assumptions. The anti-floatation ring indicated as standard equipment should be at least 8" wide.

Please note that code related compliance and appropriateness were not evaluated.

Regards

A handwritten signature in blue ink, appearing to read "Michael Matthes", is written over a light blue horizontal line.

Michael Matthes, PE

Class I, Division 1, Groups C & D  
Class I, Zone 1, Groups IIA and IIB

### PRODUCT SPECIFICATIONS

MOTOR	Horse Power	2
	Voltage	200 - 575
	Phase	1 or 3 Ph
	Hertz	60 Hz
	RPM	3450
	Type	Capacitor start / capacitor run or 3 Ph
	Insulation	Class F
PUMP	Amps	4.5 - 20.0
	Operation	Nonautomatic
	Discharge Size	1-1/4" NPT vertical
	Cord Length	20' (6 m) standard
	Cord Type	UL listed, SOOW
	Max. Head	125' (38.1 m)
	Max. Flow Rate	54 GPM (204 LPM)
	Max. Operating Temp.	104 °F (40 °C)
	Cooling	Oil filled
	Motor Protection	Auto reset thermal overload (1 Ph) or thermal sensor (3 Ph)
MATERIALS	Cap	Cast iron
	Motor Housing	Cast iron
	Adapter	Cast iron
	Pump Housing	Cast iron
	Upper Bearing	Ball bearing
	Lower Bearing	Ball bearing
	Mechanical Seals	Carbon/ceramic with stainless steel parts
	Impeller Type	Non-clogging vortex
	Impeller	Ductile iron
	Hardware	Stainless steel
	Motor Shaft	Stainless steel
	Square Rings	Neoprene
	Cutter	Hardened 440 C stainless steel, Rockwell C55-60

Model X840 is a reversible grinder pump, and models X841 and X842 are single-direction grinder pumps.

All installation of controls, protection devices and wiring should be done by a qualified licensed electrician. All electrical and safety codes should be followed including the most recent National Electrical Code (NEC) and the Occupational Safety and Health Act (OSHA).

$\square$  Single phase units require a set of capacitors and relay starting components.

## STANDARD FEATURES:

- cCSAus rated Class I, Division 1, Groups C & D and Class Zone 1, Groups IIA & IIB Construction
- Tested to FM standards 3600 and 3615 by CSA
- Reversible cutter action manual/auto\*\*
- 1-1/4" NPT vertical discharge
- Carbon/ceramic tandem seals
- Thermal sensors\*\* (overload on 1 Ph)
- Moisture probes\*\*
- Vortex impeller: Ductile iron
- Stainless steel cutter and plate (R-C 55-60)
- Stainless steel shaft
- Stainless steel lifting ball
- Corrosion-resistant, powder coated epoxy paint
- 20' (6 m) power cord - 20' (6 m) sensor cord

## OPTIONS:

- ☐ Extended cord lengths
- ☐ Bronze impeller
- ☐ Anti-siphon device

\*\*Requires circuit in control panel to function  
Reversible feature only available on X840 models

## VARIABLE LEVEL FLOAT SWITCH ASSEMBLY

3 Switches with weights and brackets

- ☐ P/N 10-3237 WGT. 10 lb (4.5 kg)

4 Switches with weights and brackets

- ☐ P/N 10-3238 WGT. 14 lb (6.4 kg)

Note: All variable level float switches in this section are mechanically activated and do not contain mercury.

## CONTROL PANEL

### STANDARD FEATURES:

- NEMA 4X outdoor rating
- Intrinsically-safe relays
- Audible and visible high water alarm
- Starting, control, and alarm circuits
- Circuit breaker and rated motor contactor (1 Ph)
- Capacitors and motor starting relay (1 Ph)
- Motor-protective switch (circuit breaker/adj overloads) and rated motor contactor (3 Ph)
- Alternating circuit (duplex)
- Automatic reversing circuit (model X840 only)
- High water alarm light
- Internal seal leak light
- HOA switches and pilot light(s)
- Terminal strips
- Thermal cut-out circuit (3 Ph only)
- Padlock hasp
- UL listed
- Dry auxiliary contacts

### OPTIONS:

- ☐ Flasher for high water alarm light
- ☐ Manual reset of high water alarm
- ☐ Elapsed time meters

For other options, please consult factory.

\*These control boxes consist of the reversing mechanisms and capacitors (1 Ph units) only. They will not control pumps. Refer to Section B for complete system controls. For duplex applications use two simplex reversing control boxes. (For pump prefix identification see News & Views 0052)

# OUTDOOR BASIN, COVER, AND RAIL SYSTEM ASSEMBLIES STANDARD EQUIPMENT

- Fiberglass basin with anti-flotation ring
- (2) Steel electrical couplings
- 2" PVC discharge pipe from disconnect
- 2" Adaptaflex discharge pipe seal
- Non-sparking Z-Rail® disconnect system
- 8' (2.4 m) stainless steel lifting cable
- 3/4" stainless steel rail pipe
- For basin depths to 84" (213 cm) [2' (3.7 m) stainless steel lifting cable for basin depths of 96" (244 cm)]
- 2" PVC ball valve(s)
- 2" cast iron check valve(s)
- 1-4" rubber inlet pipe seal (field-installed)
- Blank fiberglass cover with Zoeller imprint

## SIMPLEX

- 24" x 60" (61 x 152 cm) P/N 33-0998 WGT. 189 lb (85.7 kg)

CLIENT: City of Sedro-Woolley  
PROJECT DESCRIPTION: Winnie Houser Park  
DATE: 27-Apr-20

3 feet

## the Main

Headloss Coefficient

Minor Headloss Coefficient	4.62
----------------------------	------

## Buoyancy Calculations

Project: City of Sedro-Woolley Winnie Houser Park  
Date: 04/27/2020  
Facility: Sewer Pump Station  
By: Michael Matthes

### Assumptions:

SHGW = Surface  
Soil Density Saturated ( $\gamma_{sat}$ ) = 60 pcf  
PS diameter = 2', Weight w/o pumps = 190 lb  
Base Extension = 8"  
 $\gamma_{water}$  = 62.4 lb/cft

### **1) Upward Buoyancy Force $F_b$**

Volume displaced water =  $\pi \times r^2 \times D = \pi \times 1 \times 6 = 20 \text{ cft}$   
 $F_b = 20 \times 62.4 = 1,200 \text{ lb}$

### **2) Downward Weight Force $F_w$**

Pump Station:

$F_w = 190 \text{ lb}$  given.

Soil:

For 8" base extension  
 $\text{Vol} = \pi \times D \times 0.67 \times 6 = \pi \times 2.65 \times 0.67 \times 6 = 33 \text{ cft}$   
 $F_w \text{ Soil} = 33 \times 60 = 1,980 \text{ lb}$

Total  $F_w = 190 + 1,980 = 2,170 \text{ lb}$

### **3) Downward Friction Force $F_f$**

NA.

### **4) Safety Factor SF**

$SF = F_w / F_b = 2,170 / 1,200 = 1.8$   
 $1.8 > 1.5$  ..... OK.
